

A statement to better understand my academic work/Lucio Muñoz 1999-2025

(<https://truesustainability.com/PUBLICATION.htm>)

Interested in sustainability thinking, democracy thinking, and related development issues, including social and environmental development issues, poverty, pollution, and deforestation issues.

Keep in mind; my contributions are not mainstream extensions, but outside-the-box frameworks/ideas based on conjunctural determinism. They are designed to expose and address knowledge gaps in development / sustainability /methodology /economics / democracy thinking. Looking at them as mainstream ideas when they are not as AI does and others do is wrong, which leads to distorted or incomplete or totally disconnected assessments / evaluations / understanding of the actual theoretical and practical implications of my work.

My work is not a mainstream extension, but an outside-the-box conjunctural set of frameworks/ideas that fill knowledge gaps in development / sustainability /methodology / economic / democracy / critical problem-solving thinking.
